CLAIM AMENDMENTS

Claims 1 to 7, (cancelled).

Claim 8. (New) A toothbrush comprising:

an elongated structure formed at a lower end with a hollow handle having an interior cavity;

a sliding piston in said interior cavity subdividing said interior cavity into an intermediate chamber above said piston and containing a supply of a toothpaste, and a lower chamber communicating with an exterior through a minute orifice;

a variable-volume upper chamber formed at an upper end of said hollow handle;

a spring-loaded first valve blocking flow of toothpaste from said upper chamber back into said intermediate chamber, but permitting flow of toothpaste from said intermediate chamber into said upper chamber upon a reduction in pressure in said upper chamber;

a trigger at the upper end of said hollow handle, manually displaceable generally axially thereon, and decreasing a volume of said upper chamber to displace toothpaste therefrom, said trigger having an elastic repositioning device in the form of a spring urging said trigger into a position corresponding to a maximum volume of said upper chamber; and

a tubular extension having:

a passage extending along a length thereof and 22 communicating with said upper chamber to receive toothpaste 23 therefrom upon actuation of said trigger, 24 a brush head at an end of said extension 25 having a head orifice communicating between said passage and said 26 brush for delivering toothpaste to bristles thereof, and 27 a spring-loaded second valve at said head 28 orifice to allow toothpaste to pass through said head orifice only 29 when pressure in said passage is in excess of ambient pressure. 30

Claim 9. (New) A toothbrush comprising:

an elongated structure formed at a lower end with a hollow handle having an interior cavity;

- a sliding piston in said interior cavity subdividing said interior cavity into an intermediate chamber above said piston and containing a supply of a toothpaste, and a lower chamber communicating with an exterior through a minute orifice;
- a variable-volume upper chamber formed at an upper end of said hollow handle;
 - a spring-loaded first valve blocking flow of toothpaste from said upper chamber back into said intermediate chamber, but permitting flow of toothpaste from said intermediate chamber into said upper chamber upon a reduction in pressure in said upper chamber;
 - a trigger at the upper end of said hollow handle, manually displaceable generally axially thereon, and decreasing a

volume of said upper chamber to displace toothpaste therefrom, said 17 trigger having an elastic repositioning device in the form of a 18 spring urging said trigger into a position corresponding to a 19 maximum volume of said upper chamber; 20 a tubular extension axially retractible in said housing 21 and axially extensible therefrom, said extension having: 22

a passage extending along a length thereof and communicating with said upper chamber in an extended position of said extension to receive toothpaste therefrom upon actuation of said trigger, said passage not receiving toothpaste from said upper chamber in a retracted position of said extension,

a brush head at an end of said extension having a head orifice communicating between said passage and said brush for delivering toothpaste to bristles thereof, and

a spring-loaded second valve at said head orifice to allow toothpaste to pass through said head orifice only when pressure in said passage is in excess of ambient pressure; and

seals around said extension and at a location of communication between said upper chamber and said passage.

Claim 10. (New) The toothbrush defined in claim 9, further comprising a lock to releasably fix said extension in said retracted position and said extended position. 3

- Claim 11. (New) The toothbrush defined in claim 10,
- further comprising a cover fitting onto an upper part of said
- handle and covering said head and said trigger.
- Claim 12. (New) The toothbrush defined in claim 9,
- further comprising a spring in said structure which is compressed
- in the retracted position of said extension.
